

RecruitAI Engine: Standardized Hiring & Recruitment Framework

This document outlines the end-to-end recruitment process utilized by RecruitAI Engine. Our framework is designed to prioritize merit, technical competency, and cultural alignment, ensuring that the talent we provide to our client companies is verified through a rigorous, data-driven approach.

1. The Candidate Lifecycle

Our hiring process is highly standardized, ensuring that every candidate undergoes the same rigorous evaluation, whether they are applying to join our internal team or a role within our client companies.

- Application Submission:** Candidates submit their applications via our integrated career portal.
- ATS Screening:** All resumes are processed through an Applicant Tracking System (ATS) to evaluate for required skills, experience, and formatting accuracy.
- Automated Assessment:** Shortlisted candidates receive an automated email containing a secure, time-sensitive technical or behavioral assessment link.
- Result Evaluation:** Our proprietary AI engine evaluates the assessment results against established benchmarks.
- Interview Phase:** For roles with high competition or complex requirements, top-performing candidates move to a live interview stage.
- Final Selection & Onboarding:** Successful candidates are extended an offer and begin our structured onboarding process.

2. Technical Assessment Protocols

Our testing methodology is designed to reflect real-world problem-solving capabilities rather than theoretical knowledge alone.

Assessment Type	Focus Area
Coding Proficiency	Algorithm design, debugging, and code structure.
Domain Specific	Practical application in SQA, Engineering, or Management.

Assessment Type	Focus Area
Behavioral/Cultural	Team collaboration, ethics, and project management approach.

3. The "RecruitAI Engine" Standard

We treat our internal hiring with the same level of scrutiny we apply to our clients. Our goal is to maintain a high-performance environment where every team member is vetted to deliver excellence. By centralizing the intake, testing, and selection process, we maintain consistency and quality across all placements.
